RF1P-ULL-GF22FDX-PLUS
Single Port Low Leakage

Register File Compiler

Ultra-Low Leakage: High V_T (HV_T) and low leakage HV_T ($LLHV_T$) devices used with source biasing to minimize standby currents while operating at low voltage
Bit Cell: Utilizes GlobalFoundries® Ultra-Low Leakage 6T (P110UL) bit cells to ensure high manufacturing yields

Four Power Modes: Active, Standby, Retention, and Power Off modes provide flexibility for power optimization

Speed Grades: Three options to adjust the speed/leakage balance and optimize for high speed or low power operation

Data Write-Through: Optionally prevent data out transitions during the write to reduce power

Error Correction: Optional SECDED logic for single-bit correction and dual-bit detection

Technology	GF 22nm FDX - PLUS
Voltage	0.8V typical
Temperature	-40°C to +125°C
Power	Mesh
# Metal Layers	4 with optional power connections in M5/C3
Speeds	Slow | Medium | Fast
BIST Mux	Optional

Max Instance	72 Kilobits
Min Instance	128 Bits
Word Width	4 – 72
Word Depth	64 – 2048
Aspect Ratio	Column Fold: 4 or 8
Write Enable	Optional Bit or Byte
Modes	Functional, BIST, Scan, Sleep

EDA Views (Partial List)	
Verilog Model with UPF	
Liberty Files (NLDM, LVF, CCS)	
PDF and Text Datasheets	Redhawk APL
LEF 5.8	Verilog Test Bench
LVS SPICE Netlist	Bitmap File (x, y)
GDS	Power Grid (Voltus)
Tessent MBIST Control File	Common Power Format (CPF)

About Nordic Semiconductor:

Nordic Semiconductor's Seattle memory team (formerly Mobile Semiconductor) provides SRAM, ROM, and Register File compilers optimized for ultra-low power, leakage, and high performance applications.
