SP-ULD-GF22FDX-PLUS

Single Port Low Leakage

SRAM Memory Compiler

Ultra-Low Leakage: High V_T (HV_T) and low leakage (LLHV_T) devices are used with source biasing to minimize standby currents while operating at low voltage

Bit Cell: Utilizes GlobalFoundries® Ultra-Low Leakage, 6T(L110) bit cells to ensure high manufacturing yields

Five Power Modes: High Performance, Low Leakage, Standby, Retention, and Power Off modes provide flexibility for power optimization

Speed Grades: Three options to adjust the speed/leakage balance and optimize for high speed or low power operation

Memory Ready Output: Create a Pseudo-Dual Port memory utilizing the READY pin

High-Density Solutions: Abutment capability to enable multi-instance macros

Data Write-Through: Optionally prevent data out transitions during a write to reduce power

Error Correction: Optional SECDED logic for single-bit correction and dual bit detection

Technology	GF 22nm FDX PLUS
Voltage	0.65*/0.8V (typical)
Temperature	-40°C to +125°C
Power	Mesh
# Metal Layers	4 (or 5 if enabled)
Speeds	Slow Medium Fast
BIST Mux	Internal
Modes	Functional, BIST, Scan, Sleep
* 65 under evaluation	

Max Instance	576Kb
Min Instance	256 Bits
Word Width	4 – 144
Banks	1 or 2
Word Depth	32 – 8192
Aspect Ratio	Column Fold: 4, 8 or 16
Redundancy (CMFOLD 8, 16)	Optional (4 or 8 repairs)
Write Enable	Optional Bit or Byte

EDA Views (Partial List)		
Verilog Model with UPF		
Liberty Files (NLDM, LVF, CCS)		
PDF and Text Datasheets	Redhawk APL	
LEF 5.8	Verilog Test Bench	
LVS SPICE Netlist	Bitmap File (x, y)	
GDS	Power Grid (Voltus)	
Tessent MBIST Control File	Common Power Format (CPF)	

About Nordic Semiconductor:

Located in Seattle, Washington, Nordic Semiconductor Seattle develops SRAM, ROM, and Register File compilers optimized for applications requiring ultra-low power, low leakage, or ultrahigh performance. Member of the GF® Partner Community.
